

# Series 10-LSM

## UV-Absorber (Sunscreen Agent)

Series 10-LSM is a universal additive, which can be added to each of our colors or varnishes to counteract the influence of light in terms weathering.

By sun exposure, the binder is continuously reduced, especially not lightfast pigments are initially destroyed and the color tone changes (this can frequently be seen in faded color patterns).

By addition of approx. 3-5% of the UV-absorber (sunscreen agent), Series 10-LSM, this can be counteracted and the time period and the time period can be prolonged for several times. This must however specifically be tested every time; however a possible statement of how long this weathering can be delayed cannot be made.

ATTENTION: this additive must be well stirred in. A higher addition ratio than 3-5% does by no means have a positive influence. The additive must absolutely be protected from warmth and especially from direct light.
