

Welcome to **easyMEMO** — Printcolor's browser-based ink formulation platform for screen and pad printing inks. Work from your computer, tablet or phone to find, build, print and calculate formulations. Here is where to find each feature.

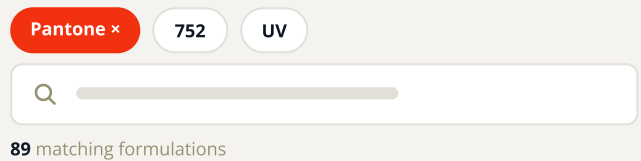

## 1 Ink Formulations

Your main workspace. Every ink formulation you have access to lives here, ready to view, copy, or print.

## 2 Filter and search

Narrow the list by ink series, color mixing system or portfolio — or search by name and article number to find formulations fast.

## 3 Create a new formulation

Add a formulation visible only to your company — name it, pick a series and mixing system, then add your components.

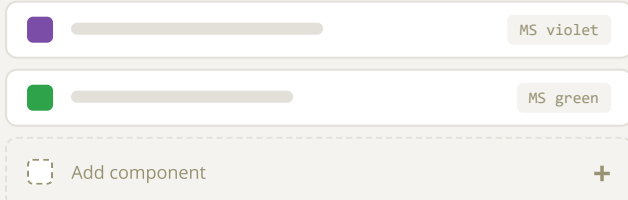

## 4 Ink Series

Browse every ink series — solvent-based, UV curing and water-based — and see the components included in each one.

## 5 My Components

Add components exclusive to your company. They become available whenever you create your own formulations.

## 6 News

Keep up with the latest product updates, announcements and technical notes right here.

### Ready to start?

Open easyMEMO in your browser — available in EN · DE · FR · ES, no installation needed.
